

Anti-Human HAEMOGLOBIN F
(Polyclonal Sheep)

Cat. No.:	CA-1034
Antigen:	This Anti-Human Haemoglobin F Antibody was raised in rabbits after immunisation with Human foetal haemoglobin Type $\alpha + \tau$ (some ϵ).
Titre:	Over 1000:1. It is recommended that the individual lab obtain their own optimal dilutions for their assay.
Reactivity:	Specific for human HbF and minimal cross reactions with other Human serum proteins.
Presentation:	Whole serum
Applications:	<p>ELISA and immunopurification. Immunodiffusion plates for the determination of human HbF.</p> <ol style="list-style-type: none">1. This antibody showed a titre of over 1000:1 in immunodiffusion assays.2. There was minor detectable reaction with HbA by Ouchterlony diffusion.
Storage:	Store at +4°C. For extended storage, freeze in working aliquots at -20°C. Avoid repeated freezing and thawing.
